

The hatchery programme was continued in the 1983-84 season also and the details of work carried out will be furnished in due course.

### STATUS OF SEA TURTLE CONSERVATION IN KARNATAKA STATE

S. L. CHANDARJI

*Assistant Conservator of Forests, Karwar, Karnataka*

The Karnataka State has a coastline on western side having Arabian Sea to a length of about 207 km. As per the recent Wildlife (Protection) Act, action is being taken to conserve and protect sea turtles along our coast. The available information shows that sea turtles are found along the coastal sea and come out at number of places for nesting. It is learnt that eggs of turtles are collected by poorer class of people and consumed as food. But the selling of turtles and eggs in large scale in bazars is not reported. We have fairly good response by recent publicity on conservation and protection of turtles. We will chalk out a programme and plan to conserve the turtle in Karnataka after consulting higher authorities by making use of the valuable suggestions of the Workshop.

### DISTRIBUTION OF NESTING SITES OF SEA TURTLES IN MAHARASHTRA

KAFEEEL A. SHAIKH

*Deputy Conservator of Forests, Wildlife, Thane, Bombay,  
Maharashtra*

It is now recognised all over the world that most species of sea turtles are commercially over exploited and are in urgent need of complete protection for survival, especially as the females come on the seashore for egg laying. The eggs also fall prey to human and other predators. The International Union for Conser-

The hatchery programme was continued in the 1983-84 season also and the details of work carried out will be furnished in due course.
